Zmann Computing

## IF YOUR WIRELESS NETWORK EXPERIENCES CONNECTION PROBLEMS, DO THE FOLLOWING:

Step 1: Shutdown your computer, unplug the power from the Router & the Internet device (DSL or Cable modem)

Step 2: After a few minutes, plug the power back into the Internet device (DSL or Cable modem) and wait for lights to stop blinking. (If they do not stop blinking, contact your Internet Provider to verify that you have service)

Step 3: Plug the power back into the Router and wait for lights to stop blinking on the Router

Step 4: Turn computer back on and test connection

**NOTE: 2.4 GHz cordless phones, baby monitors and other wireless networks (from neighbors) can impact wireless network connections.**

If your connection problems persist, contact Data Doctors for possible upgrade options.
